

Basic Information

- Name: João Marques
- Age: 22
- Current Occupation: Computer Science Student

Description

I am mostly interested in Object Oriented Programming languages, as they are more adaptive, even if less efficient (*coughs Java coughs*) and how to use it in modern life, and how to easen our daily routines with applications to automate, or hasten, monotonous, boring tasks.

I am enthusiastic about games, and how we, the small developer community that plays a specific game, can aid its growth in some way. One of my apps, IFBCompanion, is one such example, of how a **very** simple app can make the gaming experience more pleasant in some way (even though is targeted at a niche).

I also dabble a little in writing light novels (as poorly as that might be) and am an avid reader, be it standard novels, light novels, manga, anything that can pique my interest.

Skillset

- ++ = Highly proficient
- + = Proficient
- +/- = Used before, but not often

Programming Language	Level
Java	++
C	+
C++	+
JS/JQuery/HTML/CSS	+/-
Sass	+
Python	+
LISP	+

Technology	Level
Android SDK	++
IntelliJ IDEA/Android Studio	++
Git	++
Maven	+
Jekyll	++

Languages	Level
English	++
Spanish	+/-
Portuguese	++

Work experience

Android Developer @ boomApp

Front-end developer for android app meant to show the company's revolutionary image and video recognition technology.

Had to handle log ins to facebook (and boomApp's own login server), communicate with the company's API for media processing, process video and image data.

Education and certificates

- 12th grade at [Colégio St. Peter's School](#)
- [Certificate of Proficiency in English \(CPE\)](#), issued by the University of Cambridge (CEFR level C2).
- [Computer Science Undergraduate](#) at [Instituto Superior Técnico](#) (2012-present)

Personal projects

RSAppCentral

Centralized library application for Runescape-related apps. Will include accessors for monster, skill, and any other useful data which will be provided in the form of JSON Strings and String arrays and, eventually, an API to be included on my [personal website](#).

IFBCompanion

Android application (deployed on Google Play) to easen the grind for a bossing title in Runescape, [Insane Final Boss](#).

My Personal Website

A website to host all my personal projects, like light novels, applications, and so forth, hosted at Github Pages.
